

Robots I - Week 10

Backwards or Forwards

Which is Better - Forward or Backward?

This week will be replaying the code from Week 5 (Keyboard Control) however, we want to change the direction of our robot. The back of the robot is now the front of the robot. This means that everything is swapped out. Left is now right and vice versa!

Make a copy of your code from Week 5 and compare which is better. You may want to add the left/right motor speed compensation to help your robot go straight.

As soon as everyone is able to run in both modes, we'll have another race!
