Robots I - Week 9

Escape the Room

Challenge Problem

Your challenge for this week is to make any required modifications to the Cruise Control code to increase the chances of your robot escaping from a box. Many robots will be operating in the box at the same time and there is only one exit.

You may want to revisit your PBRCL exercises to see if you can find the steps to exit the box, however, you'll need to code these actions into python in order to complete the challenge.
